Early examples of Ice-Harvesting

Figures 16, 17 First the ice, which by now was 1-2 feet thick, had to be cleaned, cleared of all leaves, twigs, grasses and snow. The ice ploughs, drawn by horses, traversed a section of the lake, cutting the ice in long strips about two feet wide.

Figures 18, 19 A gang of men with huge hand saws cut these strips into two-foot squares. It was a skilful job cutting the ice.
