WHEN WE REBUILD OUR FACTORIES

When we rebuild our factories, plant efficiency and staff welfare will work hand in hand for peak production. The workshops will be as warm and comfortable as the Managing Director's office, and the canteen and welfare departments will be show-places of the Works. Steam, water, gas, oil and air supplies to the plant, heating, hot and cold water supplies and staff cooking apparatus will need miles of iron pipe and fittings—especially GF malleables. Are you fully acquainted with the pattern range?

WELLINGTON

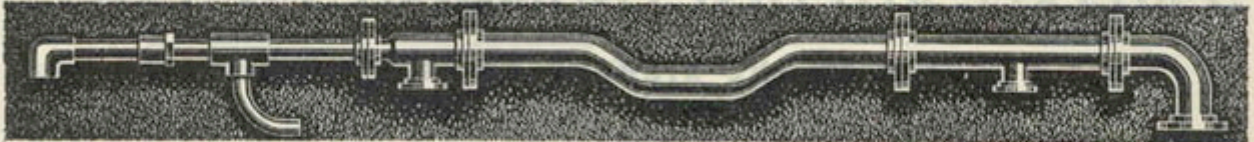

Referring to a Naval gun-brig that accompanied Wellington's equipment in the Peninsular War, the Duke often remarked in after years, "But it was always so, I never found naval men at a loss. Tell them to do anything that is not impossible, and depend upon it they will do it."

We have echoed those words in two major wars since Wellington's remarks were made, and we at "Wellington" feel a sense of pride in the part we have

played in the Country's achievements. We have often been called upon to do the near impossible and achieved the required result. Through our 70 years' experience in the manufacture of Iron and Steel Tubes we have been the recipients of many problems. We welcome these "difficult" enquiries for the satisfaction of solving them. Our knowledge of tubes and their uses is always at your disposal.
