1927
PAPER

ON

THE DETERMINATION OF PIPE SIZES FOR HOT-WATER HEATING SYSTEMS.

BY

CHARLES KNUTH, JNR., (Member), Budapest.

Summer Meeting, Southport, June 25th, 1912.

The present paper was suggested originally by Mr. Dolby's paper of last year on "Some Doubtful Points in Hot Water Heating Plants" and the discussion which followed it. The President, Mr. Honiball, invited the author to follow up this subject more fully so as to make a self-contained paper of it.

Its author has been for about twelve years continually working on the line of the approved continental methods of calculations. He on one side had the opportunity of watching the working of the plants calculated under his supervision, on the other side hopes to submit some information which will prove useful and novel to members of the Institution.

All that is contained in subsequent pages is founded on the work of Rietschel, who as the first gave a most scientific base to the complicated matter of calculating pipe sizes of hot water heating systems.

Besides Rietschel's book, "Leitfaden zum Berechnen und Entwerfen von Lüftungs und Heizungs Anlagen" IV Edition, the author used Recknagel's 'Die Berechnung der Rohrweiten bei Schwerkraft-Warmwasser-Heizungen" with book of tables. Some of the tables were adjusted from the reports on the
